PROJECTS

EDSAFounders.com
Fullstack Developer
San Diego, CA
2018

Built using Vue, Contentful, and Nuxt. It allows for easy access by editors and authors to their articles using the Contentful CMS. While being a mostly static site, it uses very powerful server side rendering by Nuxt to allow for dynamic content flow.
- ‣ Solo project done as a freelance job for former President of EDSA.
- ‣ http://www.edsafounders.com/

Solarize
BackEnd Developer
San Diego, CA
2017

Solarize is a CRM built from scratch. It features landing pages allowing customers to request quotes, and affiliate login with lead tables with functioning contact methods.
- ‣ Created as part of a four man project
- ‣ Integrated Authentication methods and Contact methods using Twilio and SendGrid's SDKs
- ‣ Includes encryption using the Blowfish Cipher on server side login authentication for higher security.

- ‣ https://solarize.herokuapp.com/

GREGIS
Fullstack Developer
San Diego, CA
2017

GREGIS is a web app that allows users to find events and activities in the area around them.
- ‣ Created as part of a four man project
- ‣ In charge of integrating newer technologies, focusing on geocoding and Google Maps API integration which would be the core of the project.
- ‣ https://github.com/cindygchen/poke
- ‣ https://cindygchen.github.io/poke/
